Google has straightaway gone ahead to title the smartphone "Google Pixel" and Pixel XL. The new smartphones will have excellent contrast and very deep black levels. (Hurray!) at the top and USB type-C port at the bottom for logo at the back of phone. The phone is actually made by HTC. Polished glass combination. This combination looks quite polished and is easy to hold. The sides of the phone are rounded, which gives the phone a smooth finish and a solid grip. Glass is now used in a revised design in a large area for strength and durability for a better user experience.

These phones come equipped with all new Google Assistant that offers seamless and easy access to relevant information. It is an AI-powered personal assistant that enhances the user's experience. Google Assistant can help you set reminders, provide information, and respond to your queries. The Assistant can also be used to control smart devices and appliances in your home. It can also help you in navigation, weather updates, and news updates.

The Google Pixel has a 5-inch screen while the Google XL has a 5.5-inch screen. The Google XL has HD resolution. The screen of the smartphone is called as the "Liquid crystal display" (LCD). This technology emits light from a back-lit source. This makes the display brighter and more energy efficient. It is also due to screen being Back-lit. However, due to the screen, the colors on the display are not as vibrant as that of the liquid crystal display (LCD).

One more innovative feature is cloud-based closed folder. New Google will allow unlimited changes for full-resolution images and video to the phone. That means all your images and videos will be automatically uploaded to Google Photos. So you never have to worry about running out of space or losing your favorite memories due to unsupported memory. Furthermore, you can also access your photos from other devices as well. In addition, the phone can also be used to transfer files to other devices or the cloud. The phone comes with a fingerprint sensor, which increases the security of the device. A fingerprint sensor is an optical or capacitive sensor used to identify a person based on their fingerprint. It provides a secure way to unlock the device or authenticate a user.

Battery and Storage
Google Pixel packs 2770mAh battery while Pixel XL has 3450mAh battery. The battery backup of the new smartphone is 20 hours for talk, 24 hours for video, or 2 days of mobile usage. The Pixel phone has 3GB RAM and 32GB internal storage.

Pricing and Availability
Google Pixel smartphones are available for pre-order from October 21, 2016 (at a cost of Rs 63,000 for the Pixel and Rs 79,000 for the Pixel XL). The smartphone will go on sale in the US, the UK, and Japan, and will be available in 3GB RAM and 32GB internal storage in other countries.

In order to take a better look at the smartphone, let us examine it closely. The Pixel phone is thin and light, making it comfortable to carry. It is easy to hold and use. The phone has a plastic body, with slight metal accents, giving it a nice finish. The phone has a 5-inch full HD display, with a resolution of 1080 x 1920 pixels. The display is bright and colorful, with good contrast and sharpness. The smartphone has a 12.3-megapixel rear camera with a f/2.2 aperture. The camera is capable of capturing high-quality images in various lighting conditions. The smartphone also has a 2-megapixel front camera for selfies.

Long distance marriages are getting more common these days in urban India. But those women whoquit the urban scene to be with their husband in rural lower caste part, the new mobile phones will come in two storage configurations, 32GB and 128GB. Now coming to storage, we can have backup of 7 Hours. Now coming to storage, we can have backup of 7 Hours. Now coming to storage, we can have backup of 7 Hours.

In what happens when women have to work, a lot of them are working to support their husbands. They want to be there when their husbands are at work. When their husbands are busy and away, they want to be there and support them. When their husbands are away, they want to be there and support them.

So far as the rural women, they are more concerned about the family and their children. They are getting more concern these days in rural lower caste classes. As far as women are concerned, while marrying, they opt for long distances to have professional and social opportunities. For those who choose to migrate, it is not that easy. They have to make a difficult decision. It is difficult for them to take a decision. Does their decision make them anti-feminist? Does it make them anti-woman?

But do they always have this choice? Like Dipika who had to leave her friends and colleagues locked away, when she decided to call it quits, although she obviously did not have to please herself or any other aesthetic procedure, there are other options available. In case you are looking for a new look and want to enhance your features, then you can choose rhinoplasty. It is one of the most common and popular cosmetic procedures. It involves changing the shape of the nose to achieve the desired appearance. The procedure is usually performed in a hospital or clinic setting and takes about 2-3 hours to complete. The incisions are made inside the nostrils, which are then closed with suture. The patient is usually discharged within 24 hours of the surgery. The results of rhinoplasty can vary depending on the individual's unique characteristics and the desired outcome.

Rhinoplasty involves the removal or reshaping of the cartilage and bone of the nose. The procedure can be performed through an open or closed approach. In the open approach, incisions are made on the outside of the nose, which can leave visible scars. In the closed approach, incisions are made inside the nostrils, which are then closed with suture. The patient is usually discharged within 24 hours of the surgery. The results of rhinoplasty can vary depending on the individual's unique characteristics and the desired outcome.

Being a precision surgery, results depend on the expertise of the surgeon and the patients' compliance. So being in touch with reality is very important. So being in touch with reality is very important. So being in touch with reality is very important. So being in touch with reality is very important.

If you're looking for a new nose, here are some tips you can follow:

1. Consult an experienced plastic surgeon: Before undergoing any cosmetic procedure, it is important to consult an experienced and qualified plastic surgeon. They will help you understand the procedure, recovery, and potential outcomes.
2. Research the procedure: Do your research and read about the procedure, its risks, and benefits. Make sure you understand the potential outcomes and what to expect.
3. Communication is key: Communicate with your surgeon about your goals, expectations, and concerns. This will help them tailor the procedure to your specific needs.
4. Recovery: Recovery is an important part of the process. Make sure you follow your surgeon's instructions for recovery.
5. Be patient: Results may take time to show. Be patient and allow your body to heal properly.
6. Follow up: Follow up with your surgeon for regular check-ups to ensure you are healing properly.

If you are looking for a new nose, then you can follow these tips. But remember, it is not a one-size-fits-all solution. You need to choose the right procedure and surgeon for your specific needs. So choose wisely!
