Tuberculosis and declining fertility

Dr. Richa Sharma & Dr. Anil Basnet

TB/Tuberculosis (TB) is still a major concern in India, but TB of the genital tract needs to be considered in the correct management of infertility cases, especially in the younger population. Today, TB has become much less common, because of improved public health and the use of antibiotics. While it is now less common, TB remains one of the leading causes of death and disability globally.

FACTORS TO ASSESS FERTILITY POTENTIAL

- Various factors help to know prog-
- Biological age
- Biochemical parameters
- Key hole surgery (Laparoscopy)
- Trans-Ante Vlo Etherio-
