

Indian Navy chopper makes controlled landing

MUMBAI, Mar 8: An Indian Navy Advanced Light Helicopter (ALH) on a routine sortie with three personnel on board made a controlled landing off the Mumbai coast on Wednesday, an official said. The crew was rescued by a naval patrol aircraft, said the official.

"An Indian Navy ALH on a routine flying mission off Mumbai experienced a sudden loss of power and rapid loss of height. The pilot carried out controlled ditching over water. All three crew exited the helicopter safely and were recovered as part of a swift rescue operation," the official said.

Ditching refers to a controlled landing on water, the official said.

"The pilot did a controlled landing so that the aircraft is not lost. The floatation gears were deployed and efforts are on to salvage the helicopter," the official said.

The crew was brought to the Navy's helicopter base INS Shikra and medically examined. All three are safe, said the official.

An inquiry to investigate the incident has been ordered, the official added. (PTI)

Study reveals association of secondhand smoke and severity of COVID-19

NEW DELHI, Mar 8: A study led by the AIIMS-Gorakhpur has showed a link between secondhand smoke and the severity of COVID-19 in non-smokers.

According to the first-of-its-kind study conducted across six states, reported exposure to second-hand smoke at home and the workplace significantly increased the chances of developing severe COVID-19 compared to those not exposed to it.

"The health risks due to exposure to SHS is in infringement to basic human right to life," said Dr Surekha Kishore, executive director of the All India Institute of Medical Sciences (AIIMS), Gorakhpur, Uttar Pradesh.

"Findings of our multi-centre study demonstrate that exposure to secondhand smoke increases vulnerability to COVID-19 severity in non-smokers."

"I congratulate the Government for initiating the amendment of COTPA (Cigarettes and Other Tobacco Products Act) 2003 and urge it to expedite this process so that non-smokers can be protected from being exposed directly and indirectly to tobacco products," she said.

While research has shown that smoking increases the likelihood of COVID-19 infection and the severity of the illness, few studies have addressed the impact of secondhand smoke on the severity of Covid cases, according to a statement.

Secondhand smoke contains more than 7,000 chemicals and is a known cause of diseases such as lung cancer, coronary heart disease and chronic lung disease that increase the severity of COVID-19, experts said.

DIP/J-16423
Dt: 08-03-2023

While India's tobacco control law prohibits smoking in many indoor public places and the workplace and public transport, smoking is still allowed in designated smoking areas in airports, hotels having 30 or more rooms, and restaurants having seating capacity for 30 or more.

The study's objective was to examine the association of exposure to secondhand smoke in the home or workplace with the severity of COVID-19 among non-smokers, according to the statement.

The researchers used in-patient records to identify individuals aged 18 and older who were diagnosed with COVID-19 and admitted to hospitals with severe signs of the virus from January 2020 to February 2022. (PTI)
